'39-'40 Ford SuperFlow w/drier

35177-VFG #8 line for '39-'40 Ford Super Flow w/drier

Redesigned Remote Mount Condenser

Allows you to install A/C in your car when there is no room to mount a condenser in front of your radiator. Installation will require a trinary function safety switch (page 54) and an extra long hose kit. Must be mounted in a location allowing adequate air flow to enter and exit condenser.

New remote condensers include SPAL high performance fan and ABS shroud. 14" wide x 20" long x 4" thick.

Not recommended as a primary condenser - Ask your dealer about specific applications and recommendations.

03143-VUC Remote condenser 14" x 20" with 14" SPAL fan

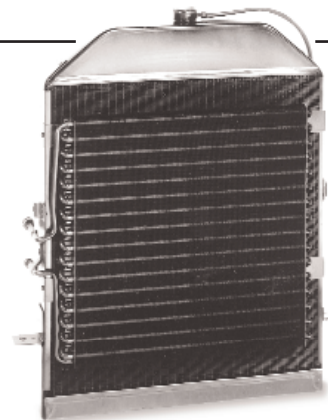

03500-OVA Remote condenser 12" x 20" with 12" skewed blade fan. (not shown)

High Efficiency Replacement Radiators

Vintage Air offers a new direct replacement radiator for your street rod. For cars with more than 400 cubic inches we recommend using only high performance type radiators such as Walker Z-Line the equivalent. We always recommend running a fan shroud for maximum cooling efficiency - see next page for details.

NOTE: Please allow 4-5 weeks for all radiator deliveries. No returns on custom radiators or special orders.

INDUSTRY RECOGNITION

1989 was a good year for Vintage Air. We continued to grow and create new products for the street rod market. The National Street Rod Association gave us their Industry Appreciation award in '89. We didn't ease up after that award and we won't coast after any others either.
